STUDIO

ROAD NO. 71, PLOT NO. 21  
JUBLEE HILLS, HYDERABAD

## Project Management

At any given moment, our expert producers and coordinators can put their hands on budget and shot status, deliveries, FTP postings, all your notes, and a complete history of any shot. You won't have to worry about anything except your test audience.

## Visual Effects Designs

Our supervisors and VFX leads thrive on solving effects challenges and designing shots and solutions that will fit the bigger picture of your project. We can provide any level of R&D or proof of concept work. We understand the importance of conveying ideas visually, in the right light at the right time.

## Pre Visualization

Setting up the scene on the computer with an experienced artist can save hours or even days of work on set. We can pre-visualize at our place, or send one of our artists to you, on set, with a fully geared up mobile pre-vis system.

## On Set Supervision

Our experienced supervisors have a knack of saving massive amounts of your time by producing plates and elements on set that will make the final product shine. Once into the post process, the supervision is supported by the management team and a talented, experienced group of digital effects specialists.

## Full CG Modeling, Animation, Lighting, & Rendering

Have a look at our reel. The work speaks for itself. Our final rendered images reflect all the sweat and creative passion we've poured into them. With a full complement of the best tools of the trade - and even some we've made ourselves - there's literally nothing we can't do.

## Digital Animation

Our character animators are well.... real characters. We're constantly developing new talent and experimenting with software and techniques to keep up with and ahead of the curve. We've got some big plans - stay tuned for all the interesting developments.

## Compositing

Putting it all together requires a keen eye for detail, and a thorough knowledge of human perception. It also requires an artist who doesn't need to go to the bathroom all the time - Our artists are trained in art 3.

## Matte Painting

These masterpieces can range from CG set extension to completely synthetic scenery. It requires artistry across several disciplines, including photography, photo manipulation and color correction, CG modeling and surfacing, traditional painting skills - and sometimes the ability to hit the parking lot with a camera, some paint, and a squeegee.
